

Underpass Flood Detector

RAS is a modular alarm system designed to warn road users in case of flooding of underpasses.

*The **capacitive technology sensor** is highly reliable and is able to detect flooding and generate an alarm that is transmitted to the control unit.*

The control unit is equipped with fixed or flashing outputs to which can be connected LED warning lights, traffic lights or LED message panel.

*RAS can be integrated with a **4G router** to send an alarm to the competent authorities.*

*The system can be powered at **230V** or with a **photovoltaic kit**.*
